

ANGELS *Region* STATUS

We are proud to announce that

has been recognized as an Angels Region,
and that our EMS

played a role in achieving this honor.

An Angels Region is a safe community for stroke. It is a region where public awareness, EMS partnerships and acute hospital care are all optimized to deliver the best possible outcomes for stroke patients.

To become an Angels Region, hospitals, emergency services and public educators must work together to provide safe hands for stroke patients throughout their communities.

100 Angels Regions is a strategy of the Angels Initiative, a unique healthcare initiative whose mission is to improve outcomes for stroke patients by increasing access to evidence-based care and optimizing treatment quality.

Angels consultants in countries around the world encourage and support hospitals and EMS to implement practices that substantially increase stroke patients' chances of survival and living a disability-free life.

The Angels Initiative has set itself the goal of converting 100 Angels Regions by December 2027.

We are proud to have contributed to this goal by achieving
status in the EMS Angels Awards by providing excellent prehospital care that improves
outcomes for stroke patients.
